

CAREER EXPLORATION SESSION

GEOSPATIAL TECHNICIAN

DECEMBER 5, 2023
4:30pm

A Geospatial Technician, sometimes called a GIS Technician or Geomatics Technician, uses hardware, including drones, survey equipment, GPS, Lidar scanners, and then software to gather and create location-based datasets to store and integrate with other data in a Geographic Information System.

Data can be associated with agriculture, environment, hydrology, meteorology, economics, infrastructure, transportation, epidemiology, crime, etc. Analyzed data might solve problems, answer questions, test hypothesis and measure interrelationships, resulting in products such as maps, graphs, charts, and statistical reports, both in digital and paper form.

Join Tobi and alumni from Lethbridge College to find out more.

Register now for this *FREE* virtual session!

Once registered, you will receive an email with the link, plus additional information regarding the event.
