```

The most familiar software are games or applications you install on your phone or PC; but software touches many industries, and many career opportunities exist building software used directly by businesses.

Modern software is typically written in 'layers'. Some Software Developers focus on the front end, or visual aspects of applications. Software Developers working on databases work exclusively on the lower layers which are less visual and often still command-line driven.

The software our host builds is used by other software developers who use a database to store data for very high traffic websites.
